Red River Achieves Advanced Data Center Specialization from Cisco

Claremont, NH (February 24, 2010) – Red River, an integrator of information technology solutions with expertise in the public sector and healthcare markets, announced today that it has achieved the Cisco Advanced Data Center Network Infrastructure (DCNI) Specialization from Cisco. The New Hampshire based company has been a Cisco Partner for over a decade and Cisco named it Public Sector Small Business Partner of the Year in 2008 and 2009. A Gold Certified Partner with Cisco, Red River is one of only a few federal partners in the nation to complete the training and program prerequisites to sell, deliver and support comprehensive Cisco Data Center solutions.

The Data Center Specialization enables Red River to expand the breadth of Cisco technologies it can offer to its customers. The curriculum for the DCNI certification focuses on enabling Cisco partners to improve business continuance, enhance security and provide better resource management in the data center. Red River has made this substantial investment in data center competencies because more and more of its customers are working to centralize and optimize their data centers and lower their energy and IT resource costs.

Rick Bolduc, CEO of Red River stated, “Our customers look to us to help design and implement scalable, efficient, and high performance data center solutions. Our goal is to lead the industry in data center optimization and in customer service, which is a critical component of our growth, success and extraordinary corporate culture.” In addition to the Data Center Specialization, Cisco has also recognized Red River for its Customer Satisfaction Excellence, for the high marks it received again this year via customer satisfaction surveys.
