

# Remote Workforce Assist

Quickly and securely enable end-user remote workspaces

Red River's Remote Workforce Assist provides a comprehensive, quickly deployable solution for a remote workforce. We deliver and manage all the essential tools you need to keep productivity, collaboration and communication on track. This includes a modernized desktop mirroring solution, collaboration and calling capabilities through Microsoft Teams and an essentials disaster recovery solution to prepare for a worst-case scenario.

## Office 365

AVAILABLE ON ANY DEVICE

TAILORED EXPERIENCE FOR USERS

### WINDOWS VIRTUAL DESKTOP

First, your employees need access to the applications they need. We can provide your team with a Windows 10 virtual desktop from the cloud, which means it is available on any device – desktop computer, laptop, tablet and even a mobile phone. The virtual desktop is optimized for Office 365 to support reliable connections to OneDrive.

We manage the virtualization, deploy and scale applications to the cloud in mere minutes. An Azure portal provides simple, unified management, allowing for a more secure and productive virtual desktop experience. We can help you tailor the experience for different user types, delivering a completely different desktop experience or additional applications.

### MICROSOFT TEAMS

A powerful collaboration tool, Microsoft Teams can allow your employees to participate in live chat, share files, meet virtually and even host live events. Instead of utilizing multiple applications for different functions, Teams can streamline your collaboration and maximize productivity. We can procure Teams licenses or enable the licenses you already have to deploy to your staff. Our Customer Success Managers can then support adoption and best practices with comprehensive training to get your team working at their peak effectiveness.

HOST LIVE MEETINGS

STREAMLINE COLLABORATION

## Azure

FREQUENT SYSTEM TESTING

STORES ESSENTIALS TO THE CLOUD

### AZURE DISASTER RECOVERY

Whenever one crisis hits, you can't help but think how you should have prepared and put steps in place for the next one. And any disaster can severely compromise your data and security, unless you have the right failsafe in place. With Azure Disaster Recovery, your business never misses a beat and data stays securely in your hands.

- Protect All Major IT Systems
- Unify Data Management, Security and Protection
- Ensure Apps work when needed most
- Frequent testing to keep systems up to date

Our disaster recovery solution stores all your business essentials in the cloud, whether you currently use colocation or an on-premise solution. You don't have to do a thing: we copy your workload, test it to be sure it's available when you need it, and if your system ever fails, we'll reinstate it from the cloud.
