

Red River's Managed SD-WAN Delivers Next-Gen Networking Capabilities with End-to-End Managed Services Support

Deploying a Software-Defined WAN (SD-WAN) solution into your network can often tax your internal IT staff. Even after installation, the solution will require additional education and effort in order to maximize the investment. Your IT staff has more important things to worry about and shouldn't commit resources towards maintaining and monitoring the SD-WAN solution. With Managed SD-WAN, we take the burden off your IT staff so they can stay focused on strategic initiatives while Red River deals with the day-to-day operations.

WHAT IS MANAGED SD-WAN?

Managed SD-WAN is Red River's end-to-end solution designed to provide Software-Defined Wide Area Networking (SD-WAN) to an organization's network infrastructure. Our solution goes beyond simple installation: we work with your team to completely integrate and manage the solution. With Managed SD-WAN, you own all the networking equipment while we help to maintain it.

From beginning to end, our Managed SD-WAN solution is designed to guide clients through a set process of Assessment, Deployment and Management. Throughout this process we focus on cost-optimization and offer a scalable model to maximize ROI. Managed SD-WAN allows us to take care of the daily network challenges, so you don't have to.

OUR MANAGED SERVICES CAPABILITIES

Red River Managed Services offers 24x7x365 support and operations services to our customers. Whether you're looking to migrate to the cloud, need a reliable security solution, or ongoing help desk support, Red River Managed Services has the experience to address your needs. With our support and technical expertise, we can provide assistance for both simple inquiries and advanced technology issues. By leveraging our team of certified experts, you can expect to improve responsiveness, drive workplace productivity and maximize your technology investments.

We offer managed services for:

- Client desktops
- Cloud computation
- Cloud data storage
- Collaboration
- Data protection
- Device management
- 24/7 helpdesk
- Network security
- NOC services
- On-site support
- Server maintenance

BEGIN YOUR SD-WAN JOURNEY

The journey begins with a detailed design discussion with our engineering team which ensures that SD-WAN is addressing your organization's unique needs. We start with a comprehensive review of your current state — applications, locations, circuits, network infrastructure, compliance and security posture. We then discuss your organization's plan for the next 3-5 years: your requirements such as cloud access, business agility, operational excellence and security, and designing our offering around those key performance indicators (KPIs).

OUR 3 STEP SD-WAN PROCESS

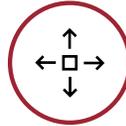

STEP 1: ASSESS

Our team of experienced and certified architects and engineers will hold design discussions regarding your organization's current state – network, security, applications and users; and create a tailored SD-WAN solution.

STEP 2: DEPLOY

After working with all your stakeholders to finalize a migration plan, we will seamlessly migrate your organization to the SD-WAN network.

STEP 3: MANAGE

Red River's Managed Services offer end-to-end networking support, including: ongoing governance, policy management, monitoring, patching and security.

BENEFITS OF ADOPTING SD-WAN

Cloud Access – IaaS & SaaS

SD-WAN solutions natively provide cloud access optimization for AWS, Azure and SaaS applications such as Office 365, Salesforce and others.

Business Agility

SD-WAN improves business agility as new branches no longer need to wait weeks or months for a MPLS circuit. Branches can be securely connected to HQ via Broadband circuits.

Operational Excellence

Holistically manage the WAN from a single window pane. Improve mean time to resolution with native analytics and easily open new branches with zero touch provisioning.

Security

All traffic is securely transported via AES 256 bit encryption allowing independence from the underlying circuits.

Application Identification & Optimization

Applications are identified and assigned QoS and SLAs which are dynamically monitored and managed without a need for human interaction.

Whether you are looking to adopt SD-WAN into your environment or take your existing networking solution to new heights, Red River has the experience to meet your organization's objectives, requirements and budget.

ABOUT RED RIVER

Red River brings together the ideal combination of talent, partners and products to disrupt the status quo in technology and drive success for business and government in ways previously unattainable. Red River serves organizations well beyond traditional technology integration, bringing 25 years of experience and mission-critical expertise in security, networking, analytics, collaboration, mobility and cloud solutions.
